

Block UBISONLAND

This block rounds the coordinates to the nearest °, and checks with an internal table if the corresponding point is probably on land or not.

This same function is used by the meteorology blocks (e.g. [MTMLALO2](#)) to check if the correct convention is used (48.77 -9.18 is in the ocean, 48.77 9.18 is on land)

UBISONLAND

Name	UBISONLAND
Function	ubisonland
Inputs	2
Outputs	1
Parameters	0
Strings	0
Group	S

Inputs

- 1 Latitude
- 2 Longitude (east-positive)

Outputs

- 1 Are the coordinates on land?

Parameters

None

Strings

None
