

Block EXPG

The EXPG block defines a general exponential function.

Name	EXPG
Function	fb0010
Inputs	2
Outputs	1
Parameters	0
Strings	0
Group	S

Inputs

- 1 Any basis value $x > 0$
- 2 Any exponent value y

Outputs

- 1 x^y

Parameters

None

Strings

None

Remarks

If the first input value x is negative, the EXPG block displays a warning message and does no operation. If this happens more than once, the warning message is suppressed. At the end of a simulation run the total number of occurrences is displayed.

expg.vseit

Two **CONST** blocks provide the constants two and three. The **EXPG** block calculates 2^3 and the **SCREEN** block displays the result

8.0
