

Block LBWX

The LBWX block returns the concentration of a lithium-bromide-water dilution as a function of pressure and temperature.

Name	LBWX
Function	st0025
Inputs	2
Outputs	1
Parameters	2
Strings	0
Group	S

Inputs

- 1

Pressure p / Pa
- 2

Temperature T / °C

Outputs

- 1

Lithium-bromide concentration x / kg LiBr kg⁻¹ H₂O

Parameters

- 1

Model

0

Mc Neely 1979
- 2

Outside-range value. If set to zero ($|BP(2)| < 10^{-5}$) data are extrapolated.

Strings

None

lbwx.vseit

The concentration of lithium-bromide-water dilution is calculated and plotted by a **PLOT** block as a function of pressure and temperature.

The pressure and temperature are varied by two nested DO blocks between 0 and 200 °C in steps of 1 °C (inner block) and 10000 and 100000 Pascal in steps of 10000 (outer block).

The outside-range parameter is set to 10^{-4} so that the curves end at a maximum concentration of 0.76 kg LiBr per kg water.
