Block UBISONLAND

This block rounds the coordinates to the nearest °, and checks with an internal table if the corresponding point is probably on land or not.

This same function is used by the meteorology blocks (e.g. MTMLALO2) to check if the correct convention is used (48.77 -9.18 is in the ocean, 48.77 9.18 is on land)

Name	UBISONLAND
Function	ubisonland
Inputs	2
Outputs	1
Parameters	0
Strings	0
Group	S

Inputs

1 Latitude
2 Longitude (east-positive)

Outputs

1 Are the coordinates on land?

Parameters

None

Strings

None
